

Seeds Roaster Machine

Main Features:

- The roaster adopts unique roller drum horizontal type structure, installed with adjustable speed motor, heating uniformity sealing well, especially suitable for braise roasting.
- Adopting copper wire motor, with low noise and long service life.
- Using horizontal cylinder, with even heating, good sealing and fried effect.
- Improved structure, the back cover can be opened, so that maintenance and repair is quite convenient.
- The outside layer of cylinder adopts excellent asbestos as heat insulator, so the heat efficiency is highly meet the temperature needs of different roasted food. The roasted food tastes good and it can save power and time.
- In the process of roasting, the raw material is fried vertically in cylinder without stick. It is convenient to be out of pot, only by pressing the clockwise and reverse switch the roasted food can be out of pot and sieve and separate without manual separation.
